Our Mission

is to be the **innovation** needed to achieve transformative improvements in cancer patient survival

Our Vision

is to become the single **best source** of transformative oncology therapeutics for the pharmaceutical industry

- **Multi-disciplinary team** of experienced industry veterans with outstanding experience in oncology drug development
- **Innovative business model** that maximizes value generation through scale and mitigates development risk, empowered by **proprietary platform technology**
- **Potential to scale** to become the best source of innovative cancer therapeutics in the industry

- Oncology therapeutics that invoke novel mechanisms or address novel targets
- Both small molecules and biologics
- Most types of cancer are in our sights
- Prioritize programs that have a lead compound with in vivo efficacy data
- Favor programs having patent applications for global coverage
- We engage early to perform the critical validation, preclinical development, IP strategy, clinical positioning and partnering

OUR PARTNERS

Leveraging unique data-driven insights into cancer biology, we collaborate with universities and research institutes worldwide to discover and advance innovative therapeutic agents. We work closely with our academic collaborators to translate scientific insights into smarter clinical development strategies and faster registration paths. Once we have achieved proof of concept, we then leverage our network of leading pharmaceutical companies who partner with us to bring life-saving drugs to market.

We welcome opportunities to collaborate with leading universities and biotech companies to advance innovative cancer therapies. Please email us a non-confidential description of your technology or collaboration opportunity at info@systemsoncology.com.

- The SO team has proven the ability to fully execute the business model
- ❖ Inlicensing and developing programs from our academic partners
 - ❖ Outlicensing programs to pharma partners
 - ❖ Helping to bring better cancer therapeutics to patients
