

ON WORLD IP DAY, WE CELEBRATE THE ROLE INTELLECTUAL PROPERTY PLAYS IN FOSTERING INNOVATION, ENTREPRENEURSHIP, AND CREATIVITY ACROSS THE GLOBE.

IP has always been a key part of American exceptionalism, and this year it is personal.

America's IP system is the foundation for new treatments and cures for patients as we all continue to battle the pandemic and its impact.

Our IP system incentivizes innovation and has enabled the development of multiple COVID-19 vaccines that became available and accessible in record time.

American innovation is making it possible for families to unite again, employees to return to work, businesses to reopen, and for us to start to resume our normal lives.

In the US, IP-intensive industries support over 45 million American jobs and deliver innovations and creative works that improve lives every day.

This year, we invite Congress to join us in celebrating America's IP that made vaccines for COVID-19 possible and is paving the way to a healthier tomorrow.
